

## PRESS RELEASE

### Use Clarea degreasers to replace toxic solvents for industrial cleaning

*Clarea* solvent degreasers are a newly formulated range of highly refined hydrocarbon based degreasing solvents with very high cleaning power and low odour, which can be used as an alternative to other hazardous solvents used throughout industry to remove oils, greases, hydraulic fluids cutting fluids and a wide variety of hydrocarbon based protective coatings.

*Clarea* solvents can be used in dip, brush or in hand-wipe applications.

*Clarea HC40* has a relatively fast evaporation rate with low odour and is suited to hand wipe and brush cleaning and air dries while *Clarea HC62* is not classified as flammable and is typically used with immersion dip and soak tanks for heavily contaminated parts where oven or forced air drying is acceptable.

*Clarea* solvents leave minimal residues on drying and are compatible with all metals and many plastics and composite materials. *Clarea* degreasing solvents can reduce usage and contain no halogens such as chlorine or fluorine so do not deplete the ozone layer or contribute to global warming.

*Clarea* solvents are one of the ranges of solvent based cleaners and surface treatment products from cleaning specialists EnviroTech Europe Ltd.
